BRUSH SPRAY NOTICE

Huron County Road / Drain Commission Vegetation Management Program

Location: Various locations along county roads and drains

Estimated Start Date: Monday, May 23, 2022

Estimated Completion Date: Fall 2022 (weather dependent)

Project: Vegetation management is an important aspect of maintaining drainage ditches and roadside slopes. By controlling woody growth and brush, drainage ditches can remain unobstructed and continue to operate and flow properly. Control of trees and brush along roadways allow for improved driver visibility and enhanced roadside safety by limiting obstacles along slopes and at intersections.

EPA registered herbicides will be applied throughout the county by direct forces or qualified contractors. These herbicides include:

- Garlon 3A (active ingredient Triclopyr) by Dow Agro-Sciences
- Garlon 4A (active ingredient Triclopyr) by Dow Agro-Sciences
- Ax-it (active ingredient Aliphatic hydrocarbon oils and selected emulsifiers) by Townsend Chemical, LLC.

This work is weather dependent. Please contact the Huron County Road / Drain Commission for any further information.

Thank you,

Erik A. Tamlyn, P.E.
Huron County Highway Engineer/
Deputy Drain Commissioner
